Figure 1: *Default predictors: (A) maximum temperature of warmest month, (B) minimum temperature of coldest month, and (C) temperature seasonality (standard deviation). Custom predictors: (D) mean GDD between Mars and October, (E) number of days with Tmean<10 between November and February, and (F) last day of frost between January and July.*

Figure 2: *Custom predictors: (A) mean GDD between Mars and October, (B) number of days with Tmean<10 between November and February, and (C) last day of frost between January and July. New custom predictors: (D) mean GDD between Mars and May, (E) mean GDD between June and September, (F) number of days with Tmin<-5 between April and June, and (G) number of days with Tmin<0 between April and May.*

Figure 3: *Correlogram of default predictors.*

Figure 4: *Correlogram of custom predictors.*
